HAIRSKILL
HAIR LOSS STEM CELLS TREATMENT

WHAT ARE THE SIGNS OF HAIR LOSS?

- Seeing more hair fall out daily either on your brush, on the floor, in showers, on your pillows or in the sink.
- Seeing noticeable patches of thinner or missing hair, including a part on the top of your head that gets wider.
- Seeing scalp skin through hair.
- Fragile hair and split ends.

WHAT ARE THE CAUSES OF HAIR LOSS?

Frequent hair styling	Abnormal thyroid
Vitamin deficiency	Blood pressure medicines
Dieting (rapid weight loss)	High doses of Vitamin A
Toxic substances	Pregnancy, menopause
Extreme physical stress	Birth control pills
Anemia	Genetic predisposition
Extreme emotional stress	Autoimmune skin disease

HOW CAN WE HELP STOP HAIR LOSS?

HAIRSKILL is an innovative, effective and safe method, based on the use of stem cells derived from adipose tissue (patient's own fat). The active substances from the stem cells regenerate the hair bulb and initiate hair growth.

HAIRSKILL is used to treat progressive weakening of the hair bulb and thinning of hair which results in hair loss.

HOW IS IT DONE ?

HAIRSKILL is a very simple procedure that requires the collection of a very small amount of adipose tissue that can be harvested in a simple outpatient session.

In three weeks, the Adipose Derived Stem Cells extracted from fat are injected into the microenvironment surrounding the hair bulb. The injected cells release specific growth factors and improves the regeneration of hair.

A part of the stem cells can be preserved with Bioscience Clinic and used for further treatments.

WHEN CAN I EXPECT RESULTS?

Initial results are visible in one month and they gradually increase over time. **HAIRSKILL** is a biological product and the results vary from patient to patient according to the biological age of the patient.
